

Honeycomb Blinds

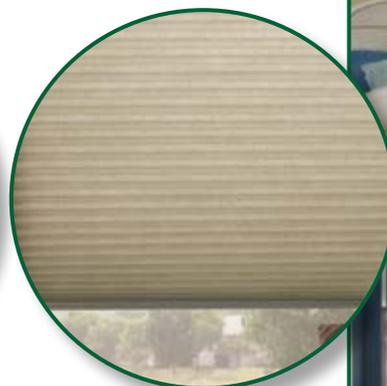

WESTRAL

WESTRAL

Westral Arena Honeycomb Blinds are a stylish, functional, versatile, energy efficient window covering solution.

They are perfect for any size or shaped window and offer insulating properties to control room temperature without compromising on style. The unique structure of honeycomb blinds means that hot air is trapped in the honeycomb cells, slowing down the transfer of hot air from outside-to-in and inside-to-out.

Westral Arena Honeycomb Blinds offer a variety of fabrics in a range of colours and styles, which provide for a wide choice of décor possibilities. There are also a number of different operating systems and design options to choose from.

Honeycomb blinds offer a number of distinct advantages over alternative window coverings such as roller blinds, including:

- **Energy efficiency** - Arena Honeycomb Blinds offer a distinctly modern appearance and are tested and proven to help reduce the cost of heating your home.
- **Superior insulation** - Arena Honeycomb Blinds feature unique air pockets that trap warm air and help to keep a more constant indoor temperature.
- **Minimal light gaps** - Arena Honeycomb Blinds have minimal light gaps, as small as 2mm in recess fit, which is a significant advantage in rooms where a complete blackout solution is required.
- **Sound absorption** - Arena Honeycomb Blinds absorb sound energy, keeping exterior noise out and dulling interior sound.

WESTRAL'S EXCLUSIVE WARRANTY

With the same WA ownership since it commenced operations in 1973, Westral looks after your investment with a full warranty against faulty products, irrespective of age, conditions apply.
